## NOTICES TO AIRMEN

NOTAM information current as of March 14, 1984#b+4/535  
FDC NOTAMS listed thru FDC 4/535, March 14, 1984

### FOREWORD

This publication is divided into two sections:

(1) The first section contains selected notices which are expected to remain in effect for an extended period, and FDC NOTAMS which are current thru the FDC NOTAM number and date shown above. NOTAMS in this publication will not be included in the Flight Service Station Service A telecommunications system and are not included in pilot briefings unless specifically requested by the pilot. If NOTAMS concerning a facility are included both in the Service A system and this publication, the Service A system information takes precedence, that is, it is considered more current. Similarly, Service A and Class Two NOTAMS take precedence over information in the Airport / Facility Directory. Complete flight information can be obtained by receiving a weather briefing and reviewing both the Class Two NOTAMS and the Airport / Facility Directory.

The selected notices are included to reduce congestion on the teletype circuits. Only those notices which are expected to remain in effect for at least seven days after the effective date of the publication will be included. The number in parenthesis after each entry is the month and year when the item first appeared in this publication.

National Flight Data Center (FDC) NOTAMS primarily reflect changes to Standard Instrument Approach Procedures. FDC NOTAMS also establish Flight Restrictions and correct data on aeronautical charts.

The last FDC NOTAM included in the publication is noted by number and date. This will aid the user in updating the listing with any FDC NOTAMS which may have been issued after publication.

The cutoff date for information to be included in this section is three weeks prior to the effective date of the publication.

(2) The second section contains special notices that, either because they are too long or because they concern a wide or unspecified geographical area, are not suitable for inclusion in the first section.

The content of these notices vary widely and there are no specific criteria for inclusion, other than their enhancement of flight safety.

The cutoff date for information to be included in this section is three weeks prior to the effective date of the publication (seven weeks prior if graphics will be required).

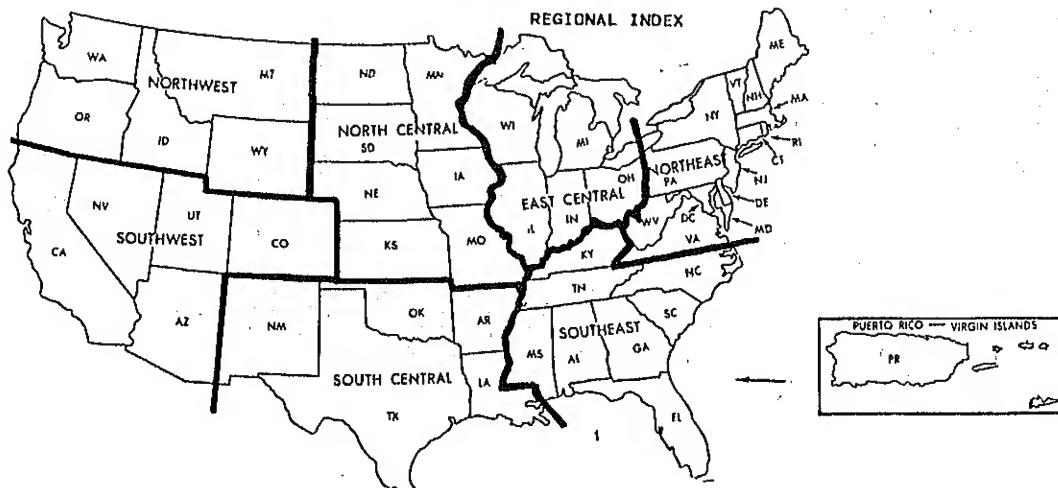

All the information contained in this publication will be carried until the information expires, is cancelled, or in the case of permanent information, is published in the appropriate publication, e.g., the Airport / Facility Directory.

NOTE: ALL times are indicated as GMT or local. During periods of Daylight Saving Time, effective hours in local time will be one hour earlier than shown. All states observe daylight saving time except Arizona, that portion of Indiana in the Eastern Time Zone, Puerto Rico, and the Virgin Islands.

NOTE: Underscored items (except city names) indicate new information in this issue.

HAZARDOUS INFLIGHT WEATHER ADVISORY SERVICE (HIWAS)

HIWAS is a national program for broadcasting hazardous weather information (SIGMET's, convective SIGMET's, AIRMET's, and urgent PIREP's) on a continuous basis over selected VOR's. The program is now operational in the Jacksonville and Miami ARTCC areas. The chart below identifies the present HIWAS broadcast outlet locations and frequencies. HIWAS will be expanded on an ARTCC by ARTCC basis.

The Federal Aviation Administration will begin an evaluation of proposed HIWAS procedural revisions on December 16, 1983. During the evaluation, SIGMET's, convective SIGMET's, AIRMET's, and urgent PIREP's will continue to be broadcast over the VOR's on the chart below. In addition, FSS's will add to HIWAS broadcasts information on hazardous weather not yet covered by an advisory and make an announcement on their frequencies that new HIWAS information is available. Controllers in ARTCC's and ATC terminals will announce updates to HIWAS information on all appropriate frequencies. Controllers and specialists will not routinely broadcast SIGMET's, convective SIGMET's, or AIRMET's in the commissioned HIWAS areas.

PILOTS SHOULD BE ALERT FOR HIWAS UPDATE ANNOUNCEMENTS ON COMMUNICATIONS FREQUENCIES.

User comments regarding the effectiveness of the HIWAS program and the proposed revision to HIWAS procedures are solicited.

Washington, D.C. and Columbus, Ohio Public Demonstration  
Voice Response System (VRS) Changes

The Federal Aviation Administration is conducting a computer generated Voice Response System (VRS) public demonstration in the Washington, D.C. and Columbus, Ohio areas. Pilots access the VRS via push-button (Touch-tone<sup>R</sup>) telephones, and normally have six weather products available.

Due to a maintenance requirement the six (weather) product VRS has been taken off the line, and temporarily replaced by a three-product system. Weather products lost are the TWEB Route Forecast, Convective SIGMET, and Alert Weather Watch. Available are the Hourly Surface Observation (SA), Terminal Forecast (FT), and Winds Aloft Forecast (GF).

Although both systems appear to function the same, the three-product VRS also features an "Unprompted" mode of operation, which enables the user to obtain a weather observation or forecast directly. This mode can be selected by entering \*M in response to the VRS prompt, "Enter location identifier." The following pilot/VRS dialogue shows key-stroke entries for weather requests using Washington National (DCA) as an example, utilizing the Unprompted mode.

VRS "Enter location identifier"  
PILOT \*M  
VRS "Enter request"  
PILOT enters any one of the following requests:  
  
Hourly Surface Observation: D-1,C-3,A-1,S,A;##  
Terminal Forecast: D-1,C-3,A-1,F,T;##  
\*Winds Aloft Forecast: D-1,C-3,A-1,#,2,#,8,0;##

Notes:

1. \*The Winds Aloft Forecast entry example above is decoded as follows:  
D-1,C-3,A-1 = Location identifier for Washington National (DCA).  
# = Single "Pound" key used as a data separator.  
2 = Forecast wanted for two hours hence.  
# = Single "Pound" key used as a data separator.  
8,0 = Forecast wanted for 8,000 feet. Notice that the VRS adds two zeroes to your entry, so only enter 2 or 3 digits.  
## = End of data entry.
2. Please notice that for SA and FT requests, the letter entries S,A and F,T are single key-strokes, unlike the double key-strokes required to enter letters and numbers in location identifiers. Similarly, numbers entered for the hours and altitude in Winds Aloft Forecasts are also single key-strokes.
3. To transfer back into the Prompted mode from the Unprompted mode, enter \*M in response to the VRS prompt, "Enter request."
4. To access the VRS, dial one of the following telephone numbers:  
Washington, D.C. (202)347-3222  
Columbus, Ohio (614)461-1659

### AUTOMATED WEATHER OBSERVING SYSTEM (AWOS)

The Federal Aviation Administration is evaluating the reliability and acceptability of automated weather reporting systems in a 1-year test beginning in August 1983. Fourteen sites were selected to test a variety of geographical and meteorological conditions. The systems will be of the AWOS-3 category providing altimeter setting and wind data, temperature, dewpoint and density altitude, visibility, and cloud/ceiling data. The test site airports and voice telephone numbers and frequencies across the continental United States and Alaska are:

<u>Airport</u>	<u>Telephone Numbers</u>	<u>Frequency</u>

All aviation users are encouraged to monitor these systems and provide their comments on the quality of the system.

Pilot comments are urgently needed to determine acceptability. Postage paid pilot questionnaires are available at local FAA facilities or fixed based operators in the vicinity of each test site.

Questionnaires may be mailed direct or returned to the local FAA facility for mailing to the FAA Technical Center, ACT-110.

MASTERS GOLF TOURNAMENT  
SPECIAL AIR TRAFFIC PROCEDURES

AUGUSTA, GEORGIA AREA

APRIL 11-16, 1984

In anticipation of the large number of aircraft traveling to and from the Augusta, Georgia, area during the Masters Golf Tournament, special air traffic procedures will be used to enhance safety and minimize air traffic delays at the following four airports in the Augusta, Georgia, area. The airports are: Bush Field, Daniel Field, Thomson-McDuffie Co., and Aiken, SC.

Aircraft not landing in the Augusta area are requested to avoid overflight below 10,000 feet within the lateral confines of the Augusta TRSA. IFR overflights can expect routing to avoid the Augusta, Georgia, area.

TEMPORARY ATC SERVICES

The Federal Aviation Administration will operate a temporary air traffic control tower and flight service station at Daniel Field, Augusta, GA.

DATE/TIME OF OPERATION

April 11-14 ..... 0800-2000 Local  
April 15 ..... 0800-2100 Local  
April 16 ..(rain date). 0800-2100 local

Control Tower Radio Call: "DANIEL TOWER" Frequency: 123.1 MHz  
Ground Control Frequency: 121.7 MHz

Flight Service Station: "SAVANNAH RADIO" Frequency: 122.3 MHz

(Airborne aircraft may contact Savannah Flight Service Station to activate or close VFR flight plans.)

STAGE III RADAR SERVICE

Bush Field: Radar sequencing will be provided to all aircraft landing at Bush Field. Contact Augusta Approach Control on 126.8 MHz (170-349°) or 119.15 Mhz (350-169°) at least 15 miles from Bush Field. We strongly suggest you DO NOT PROCEED INTO THE TRSA until receiving instructions from Augusta Approach Control.

RADAR ADVISORY SERVICE

Other Airports: Radar advisory service will be available to aircraft landing at other airports on a workload permitting basis. Contact Augusta Approach Control with your request.

FLIGHT PLANS AND TRAFFIC MANAGEMENT

VFR FLIGHT PLANS Pilots wishing to file VFR flight plans are urged to do so at least 4 hours, but not more than 24 hours, prior to their proposed departure time. Pilots planning to arrive and depart the Augusta area on the same day are encouraged to file their return flight plan with their local FSS during the initial briefing.

FLIGHT PLAN BRIEFING/CLOSING IN AUGUSTA At Daniel Field, preflight briefing and flight planning service will be available in the Augusta Aviation Building and pilots may close and file flight plans in person. Pilots landing at either Daniel Field or Bush Field may call the Savannah Flight Service Station (toll free) on 798-5164 or 1-800-342-2137 to close or file flight plans.

IFR FLIGHT PLANS Flights destined for Augusta: Due to expected volume of radio contacts, AIR FILED FLIGHT PLANS WILL NOT BE ACCEPTED by approach controls or air route traffic control centers. Additionally, IFR flight plans air filed with FSS may experience significant delays awaiting integration into the IFR system. If you plan on landing at an intermediate airport, filing of multiple legs from your original departure point will help in continuing your journey with minimum delay. The most expeditious and reliable way of getting to Augusta is PLAN AHEAD and work with the system.

IFR ARRIVAL TRAFFIC MANAGEMENT During the period April 11-16, the FAA will utilize a traffic management program for all domestic IFR flights bound for Bush Field, Daniel Field, Thomson-McDuffie Co., and Aiken, SC. In balancing the expected arrival demand for these Augusta area airports, your local FAA Flight Service Station will assign an expected departure clearance time (EDCT) for your trip to Augusta NOT MORE THAN 4 HOURS PRIOR to your proposed departure time. The EDCT will take into account such factors as weather, airport availability, and ATC capacity. The traffic management program is based on your proposed departure time, estimated time enroute, and destination airport submitted at the time of flight plan filing with your local FSS. The FAA will make every effort to get you to your destination airport and assist you in avoiding unwarranted and costly delays.

IFR DEPARTURE TRAFFIC MANAGEMENT On the last day of the tournament, April 15 (April 16 rain date), pilots proposing IFR flight from the Augusta area are requested to file their flight plans onsite in the Augusta Aviation Building, Daniel Field, or to call Savannah Flight Service Station NOT MORE THAN 4 HOURS PRIOR to your proposed departure time ON THE DAY OF DEPARTURE. At the time of flight plan filing, an EDCT will be assigned. Pilots should make every effort to be ready for departure at the EDCT as this will expedite departure operations. REQUESTS FOR IFR CLEARANCE should not be made more than 15 minutes prior to the EDCT.

VFR AND IFR DEPARTURES FROM BUSH FIELD

1. DO NOT TAXI FOR TAKEOFF UNTIL you have received taxi and takeoff information, and, if IFR, have received a clearance. For Stage III Radar Service, advise Ground Control of: Aircraft identification, type aircraft, if transponder equipped, direction of flight and/or destination, and initial cruising altitude.
2. DO NOT CALL THE TOWER FOR TAKEOFF UNTIL you are ready for takeoff and in the NUMBER ONE POSITION to take the runway.

VFR AND IFR DEPARTURES FROM DANIEL FIELD

1. DO NOT TAXI FOR TAKEOFF UNTIL you have received taxi and takeoff information and, if IFR, have received a clearance. Pilots requesting radar advisory service, advise Ground Control of: Aircraft identification, type aircraft, if transponder equipped, direction of flight and/or destination, and initial cruising altitude.
2. DO NOT CALL GROUND CONTROL TO TAXI UNTIL you are the number one aircraft that can enter a taxiway from the ramp or parking area.
3. DO NOT CALL THE TOWER FOR TAKEOFF UNTIL you are ready for takeoff and in the NUMBER ONE POSITION to take the runway.

RESTRICTED AREA ADVISORY

Pilots should be aware of the existence of restricted airspace to the southwest of the Augusta VOR and plan their flights accordingly. These areas may be intermittently activated by NOTAM. Pilots are cautioned that penetration of Restricted Areas without authorization from the using or controlling agency may be extremely hazardous:

PILOTS ARE URGED TO REVIEW ALL APPLICABLE NOTAMS PRIOR TO CONDUCTING FLIGHT.

AIRPORT RADAR SERVICE AREAS (ARSA)  
FOR  
AUSTIN, TEXAS  
ROBERT MUELLER MUNICIPAL AIRPORT  
COLUMBUS, OHIO  
PORT COLUMBUS INTERNATIONAL AIRPORT

Special Airspace designations and associated air traffic control procedures will begin at the Austin, Texas, Robert Mueller Municipal Airport on December 22, 1983, and the Columbus, Ohio, Port Columbus International Airport on January 19, 1984. Special Federal Aviation Regulation (SFAR) No. 45 which implements this program appeared in the FEDERAL REGISTER (Vol. 48, Page 50038 on October 28, 1983). The following summary of that SFAR is advisory in nature and does not relieve the pilot from compliance with the specific rules set forth in the SFAR.

An Airport Radar Service Area (ARSA) is designated airspace in which each person operating an aircraft must maintain two-way radio communications with air traffic control (ATC). Ultralight vehicles and parachute jump operations in the ARSA are not allowed except under the terms of an ATC authorization. Within these ARSA's, ATC will, in addition to the services and separation currently applied to aircraft operating under instrument flight rules (IFR), resolve any potential conflict between an aircraft operating under IFR and an aircraft operating under visual flight rules (VFR), as well as provide traffic advisory services and arrival sequencing to all aircraft. Pilots are required to comply with ATC clearances and instructions while operating in an ARSA. The purpose of the SFAR is to confirm any national applicability of the recommendation of the National Airspace Review, Terminal Airspace Task Group 1-2.2., that an ARSA program replace the existing Terminal Radar Service Area (TRSA) program.

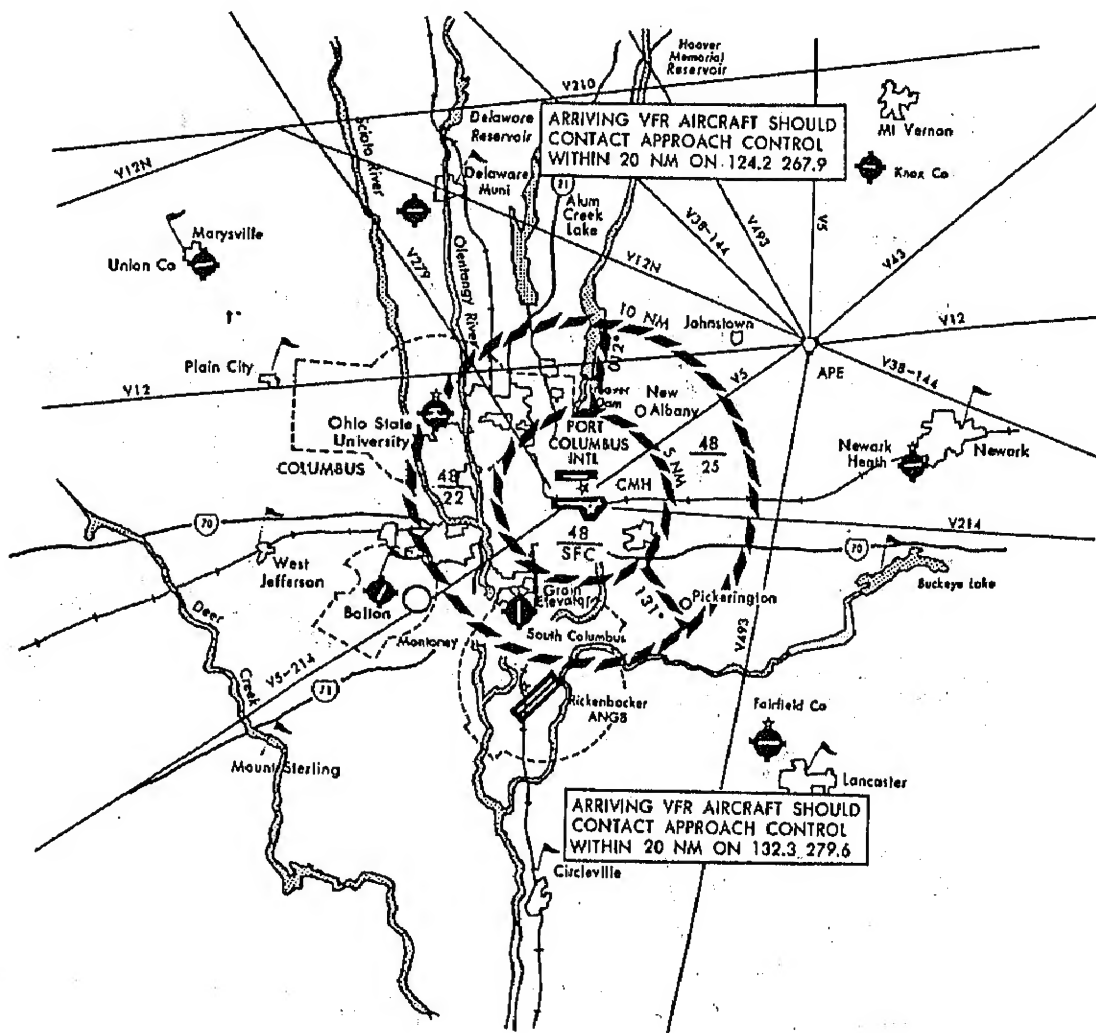

Unless otherwise authorized or required by ATC, the following provisions apply to aircraft operations within an ARSA.

1. Aircraft arriving at an airport within the ARSA or on an over-flight course that would penetrate the ARSA must establish two-way radio communication with ATC prior to entering the ARSA and maintain that communication while operating within the ARSA.
2. Aircraft departing the primary airport within the ARSA must establish two-way radio communication with ATC prior to departure and maintain that communication while operating within the ARSA. Aircraft departing a satellite airport within the ARSA must contact ATC as soon as practicable after takeoff.
3. Except in an emergency, all operations must be in compliance with ATC clearance and instructions.
4. All arrivals and departures within the ARSA must be in compliance with FAA arrival and departure traffic patterns.
5. Ultralight vehicles and parachute operations may not be conducted within the ARSA except under the terms of an ATC authorization.

6. NOTAM's pertaining to flight within the ARSA must be reviewed as a part of preflight action required by FAR Section 91.5.

See graphics for depiction of ARSA for the Austin, Texas and Columbus, Ohio airports. The same symbology is used to depict ARSA airspace on sectional aeronautical charts. These airspace designations are effective for approximately 1 year.
